

ONE THIRD RC KITS SPAD XIII-C1

OUR PRODUCTS:

- Computer-generated kits, using 3D software and 99% real scale model fidelity.
- Designed reproducing many real details that can be developed by scale builder himself.
- Developed kits for several skill scale builders, from beginners to professionals, with a medium flight skill.
- Top quality materials used. Balsa wood, poplar, beech wood, light plywood, pine, etc.
- All needed metal parts are available. More than 200 pieces in steel sheet, fully laser cut.
- Approx 700 wooden parts, on several densities, fully precision CNC milled cut.
- Lightened parts in order to achieve reduced weight, keeping a good structural resistance.
- Accurate matched parts, that requires minimal adjustments, without possibility of making assembly mistakes.
- It is not necessary precision tools for built and align the different model parts. Its developed construction system, allow you to build the model easily, with accuracy.
- Easy and quick building system characterised by the use of *tongued-and-groove type connections* between involved parts. Full size planes are not required.
- Step-by-step assembling instructions, with many images and schemes.
- Designed for many transport requirements. It can be disassembled in several main parts, for example in fuselage, half wings, coupled wings, tail, main gear, and so on.
- Designed with large access doors, as similar as possible to real plane, to get easy access to electronics, tanks and periodic maintenance.
- Pre-located servo installation system and electronics, easily adaptable to builder preferences.
- Quickly assembly time in airfield. 30 minutes estimated if a minimum of transportation room is available in your car (sport wagon car type).
- Several kit options are available for fitting builder construction preferences.
- Designed, made, built and flight a prototype, before being placed on the market.
- Very good flight performances.
- Made in Spain, by scale builders for scale builders.

BASIC KIT:

Price: 490 Euros + VAT+ Shipping

- Assembly instructions of every part, step-by-step, with images and schemes.
- Large base templates for auto alignment and quick assembly of fuselage, wings, empennage and so on.
- Approximately 140 pieces in balsa wood of several thicknesses for light ribs and bulkheads.
- Approximately 470 pieces in light plywood, of several thicknesses, for medium resistance parts.
- Approximately 75 pieces in medium poplar plywood, internally lightened for achieve good stiffness/weight rapport.
- Firewall in birch plywood 9 mm thickness.
- Plan 1:1 for elaboration of struts.
- Plan 1:1 for elaboration of tail skate and windshield.
- Plan 1:1 for elaboration of both sides landing gear.
- Plan 1:1 for elaboration of horns and special pieces.
- Plan 1:1 for elaboration of steel hinges parts.
- Fully CNC cut for bulkheads and ribs. More than 740 linear meters of CNC cutting and more than 715 lightened parts for minimal up all weight.
- CD including support pictures in order to help builder in whole assembly work.
- Bill of materials and supplied parts.

NOTE: Small changes may be done for improving between different versions.
